

As a 30 year landscape and irrigation industry professional I would like to express my full support of the attached document put forth by the California Landscape Contractors Association regarding the proposed changes to the Model Water Efficient Landscape Ordinance. The attached document provides reasonable explanation of the viewpoints that are shared by many in our green industry. I feel that the proposed changes would have a direct impact on the industry professionals that are already using practices to conserve water. This would not impact others that are not informed and therefore would continue with incorrect practices. Education should be a key focus rather than limiting the effectiveness of those that are meeting the current requirements.
